C.1 Climate change

Two climate projections are considered, a 2°C and 4°C rise in Global Mean Temperature (GMT) by 2080s (from the 1961-90 baseline as used in UKCP09). These are the same as those used for the UK Climate Change Risk Assessment (CCRA, as set out in Sayers *et al.*, (2015)). For each projection, consideration is given to changes in mean sea level, peak fluvial flows and short duration rainfall, all of which act to change the probability of flooding.

Tables C-1 to C-3 present a summary of the changes in both native units (i.e. mm/year for sea level rise) and the associated change in the return period of extreme events. More detail on the data sources used and supporting analysis is given in Sayers *et al.* (2015a).

Note: No consideration is given here to the growth of the floodplain that may result from climate change. Only the probability of flooding within the present day, undefended, 1:1000 year return period floodplain is considered. Notwithstanding the potential expansion of the floodplain under more extreme assumptions of sea level rise (as explored in Sayers *et al.*, 2015 and subsequent discussion in Edwards, 2017) this static, but broad, definition of the floodplain is considered a reasonable assumption in the context of this study.

Table C-1 Climate change: Coastal flooding (from Sayers et al., 2015b)

a) Relative Sea Level Rise projections (m) from a 2014 baseline

| Region | 2°C Projection | | | 4°C Projection | | |
|---|----------------|-------|-------|----------------|-------|-------|
| | 2020s | 2050s | 2080s | 2020s | 2050s | 2080s |
| England and Wales (based on Deakin et al., 2001, <i>apud</i> Sayers et al., 2015b) | | | | | | |
| Lincolnshire (East coast) | 0.03 | 0.13 | 0.26 | 0.14 | 0.37 | 0.64 |
| Dungeness (South-east coast) | 0.03 | 0.14 | 0.26 | 0.14 | 0.37 | 0.64 |
| Lyme Bay (South-west coast) | 0.03 | 0.15 | 0.28 | 0.15 | 0.38 | 0.66 |
| Swansea (Mid-west coast) | 0.03 | 0.13 | 0.25 | 0.14 | 0.36 | 0.63 |
| Flyde (North-west coast) | 0.02 | 0.11 | 0.21 | 0.14 | 0.34 | 0.59 |
| Scotland (locations based on CREW, 2012, <i>apud</i> Sayers et al., 2015b) | | | | | | |
| Edinburgh | 0.02 | 0.08 | 0.17 | 0.13 | 0.32 | 0.55 |
| Aberdeen | 0.02 | 0.09 | 0.18 | 0.13 | 0.32 | 0.56 |
| Wick | 0.02 | 0.11 | 0.21 | 0.14 | 0.34 | 0.59 |
| Lerwick | 0.04 | 0.16 | 0.30 | 0.15 | 0.39 | 0.67 |
| Ullapool | 0.02 | 0.09 | 0.18 | 0.13 | 0.32 | 0.56 |
| Stornoway | 0.02 | 0.11 | 0.22 | 0.14 | 0.34 | 0.59 |
| Tobermory | 0.02 | 0.08 | 0.16 | 0.13 | 0.31 | 0.54 |
| Millport | 0.02 | 0.08 | 0.16 | 0.13 | 0.31 | 0.54 |
| Northern Ireland | | | | | | |
| NI - All | 0.02 | 0.09 | 0.17 | 0.13 | 0.32 | 0.55 |

b) Example changes in the Standard of Protection by 2080s: 2°C climate change projection

| Location | England and Wales | | | | | Scotland | | | | | | | Northern Ireland | |
|---|--------------------------------------|------------|------------|----------|------------|------------|------------|------------|------------|------------|------------|------------|------------------|------------|
| | East Coast | South-east | South-west | Mid-west | North-west | Edinburgh | Aberdeen | Wick | Lerwick | Ullapool | Stornoway | Tobermory | Millport | |
| Analogue region in England and Wales | | | | | | East Coast | East Coast | East Coast | South West | South West | South West | South West | North West | North West |
| Present day SoP (return period, years) | Future SoP (return period, years) | | | | | | | | | | | | | |
| Coastal defence type: Vertical Wall | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | |
| 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | |
| 5 | 3 | 4 | 3 | 3 | 3 | 3 | 4 | 3 | 3 | 5 | 4 | 5 | 4 | |
| 10 | 3 | 4 | 3 | 3 | 3 | 4 | 4 | 3 | 3 | 5 | 4 | 5 | 4 | |
| 20 | 4 | 4 | 8 | 3 | 5 | 6 | 6 | 5 | 4 | 7 | 6 | 8 | 6 | |
| 50 | 13 | 4 | 23 | 3 | 16 | 20 | 19 | 16 | 15 | 24 | 20 | 27 | 21 | |
| 100 | 20 | 8 | 61 | 5 | 32 | 30 | 29 | 24 | 22 | 36 | 30 | 40 | 32 | |
| 200 | 53 | 20 | 153 | 17 | 48 | 80 | 77 | 63 | 58 | 95 | 80 | 108 | 86 | |
| Coastal defence type: Embankment | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | |
| 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | |
| 5 | 3 | 4 | 3 | 3 | 3 | 4 | 4 | 3 | 3 | 5 | 4 | 5 | 4 | |
| 10 | 4 | 4 | 3 | 3 | 3 | 6 | 6 | 5 | 4 | 7 | 6 | 8 | 6 | |
| 20 | 7 | 4 | 5 | 5 | 5 | 10 | 10 | 8 | 7 | 12 | 10 | 13 | 11 | |
| 50 | 13 | 4 | 23 | 9 | 16 | 20 | 19 | 16 | 15 | 24 | 20 | 27 | 21 | |
| 100 | 33 | 6 | 61 | 17 | 32 | 50 | 48 | 40 | 36 | 59 | 50 | 67 | 54 | |
| 200 | 93 | 10 | 123 | 26 | 96 | 141 | 134 | 111 | 102 | 166 | 140 | 189 | 150 | |
| Coastal defence type: Shingle beach | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | |
| 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | |
| 5 | 3 | 4 | 3 | 3 | 3 | 4 | 4 | 3 | 3 | 5 | 4 | 5 | 4 | |
| 10 | 4 | 4 | 3 | 3 | 3 | 6 | 6 | 5 | 4 | 7 | 6 | 8 | 6 | |
| 20 | 7 | 4 | 5 | 5 | 5 | 10 | 10 | 8 | 7 | 12 | 10 | 13 | 11 | |
| 50 | 13 | 4 | 23 | 9 | 16 | 20 | 19 | 16 | 15 | 24 | 20 | 27 | 21 | |
| 100 | 40 | 6 | 61 | 26 | 32 | 60 | 57 | 48 | 44 | 71 | 60 | 81 | 64 | |
| 200 | 106 | 10 | 123 | 34 | 80 | 161 | 153 | 127 | 116 | 189 | 160 | 200 | 172 | |

Example:

By the 2080s, the Standard of Protection (SOP) afforded by a vertical wall in the north-west of England with a current SoP of 1:100 would reduce to 1:32 years due to sea level rise, given a 2°C climate change projection (assuming no other change).

Table C-2 Climate change: Fluvial flooding (from Sayers et al., 2015b)

a) Percentage change (+ increase/- decrease) in peak flows from 1990 baseline

| Country | Region | 2°C Projection | | | 4°C Projection | | |
|-------------------|---------------------|----------------|-------|-------|----------------|-------|-------|
| | | 2020s | 2050s | 2080s | 2020s | 2050s | 2080s |
| England and Wales | Northumbria | 5 | 8 | 13 | 16 | 21 | 31 |
| | Humber | 3 | 8 | 13 | 16 | 21 | 31 |
| | Anglian | -3 | 3 | 10 | 18 | 24 | 42 |
| | Thames | -3 | 3 | 10 | 18 | 24 | 42 |
| | South East | -3 | 8 | 15 | 18 | 33 | 56 |
| | South West | 5 | 10 | 18 | 21 | 28 | 47 |
| | Severn | 0 | 8 | 13 | 16 | 28 | 42 |
| | Dee | 5 | 8 | 13 | 14 | 21 | 29 |
| | North West | 10 | 15 | 20 | 19 | 26 | 43 |
| | Solway | 10 | 18 | 18 | 19 | 26 | 40 |
| Scotland | Tweed | 8 | 13 | 23 | 19 | 26 | 32 |
| | Western Wales | 3 | 8 | 13 | 15 | 24 | 36 |
| | Orkney and Shetland | 11 | 19 | 27 | 16 | 22 | 33 |
| | North Highland | 7 | 13 | 18 | 14 | 19 | 29 |
| | West Highland | 12 | 21 | 30 | 22 | 30 | 45 |
| | North East Scotland | 5 | 9 | 13 | 8 | 11 | 17 |
| | Argyll | 12 | 21 | 30 | 22 | 30 | 45 |
| | Tay | 6 | 11 | 16 | 13 | 17 | 26 |
| | Clyde | 8 | 14 | 20 | 17 | 23 | 34 |
| | Forth | 7 | 12 | 17 | 14 | 19 | 28 |
| Northern Ireland | Solway | 7 | 13 | 18 | 16 | 21 | 32 |
| | Tweed | 6 | 10 | 14 | 11 | 15 | 23 |
| Northern Ireland | | 13 | 13 | 21 | 13 | 21 | 39 |

b) Example relationship between percentage changes in peak flow (from (a) above) and return period

| Region 1 | Northumbria | | | | | | | | | | |
|-----------------------|---|-----|-----|-----|------|------|------|-------|-------|--------|---------|
| | Current Return Period (years) | | | | | | | | | | |
| % change in peak flow | 2 | 2.3 | 5 | 10 | 25 | 50 | 100 | 500 | 1000 | 5000 | 10000 |
| | Revised Return Period (years) given a change in peak flow | | | | | | | | | | |
| -40 | 196 | 169 | 235 | 473 | 1330 | 2967 | 6648 | 43094 | 95943 | 607852 | 1339346 |
| -20 | 6.8 | 7.9 | 19 | 43 | 123 | 268 | 582 | 3441 | 7345 | 42206 | 89230 |
| -10 | 3.2 | 3.7 | 8.9 | 19 | 51 | 107 | 224 | 1229 | 2544 | 13687 | 28180 |
| -5 | 2.4 | 2.8 | 6.5 | 13 | 35 | 72 | 147 | 772 | 1571 | 8157 | 16557 |
| 0 | 2.0 | 2.3 | 5.0 | 10 | 25 | 50 | 100 | 500 | 1000 | 5000 | 10000 |
| +5 | 1.7 | 1.9 | 4.0 | 7.7 | 18 | 35 | 69 | 333 | 654 | 3147 | 6199 |
| +10 | 1.5 | 1.7 | 3.3 | 6.1 | 13 | 26 | 50 | 227 | 439 | 2031 | 3940 |
| +15 | 1.4 | 1.5 | 2.8 | 4.9 | 10 | 19 | 37 | 159 | 302 | 1343 | 2564 |
| +20 | 1.3 | 1.4 | 2.4 | 4.1 | 8.6 | 15 | 28 | 114 | 212 | 908 | 1706 |
| +25 | 1.2 | 1.3 | 2.1 | 3.5 | 7.0 | 12 | 21 | 84 | 153 | 627 | 1159 |
| +40 | 1.1 | 1.1 | 1.6 | 2.4 | 4.2 | 6 | 11 | 37 | 64 | 232 | 408 |

Example:

A 10% increase in peak flow (+10%) reduces the return period of flow from 1:100 to 1:50 years.

Table C-3 Climate change: Surface water flooding (from Sayers et al., 2015b)

a) Percentage changes in intense rainfall of less than or equal to 6 hours duration

| Global Mean Temperature change (from 1990 baseline) | 2020s | 2050s | 2080s |
|---|-------|-------|-------|
| 2°C Projection | 0 | +10% | +20% |
| 4°C Projection | +10% | +20% | +50% |

b) Example of present day runoff, and the return period of that runoff value in 2100 climate, assuming 20% uplift in intense rainfall of less than or equal to 6 hours

| Present Day Return period (years) | Rural | | Urban | |
|--|----------------------------|---------------------------------|----------------------------|---------------------------------|
| | Present day runoff (mm) | Future Return Period (years) | Present day runoff (mm) | Future Return Period (years) |
| 30 | 10 | 18 | 13 | 17 |
| 100 | 17 | 56 | 25 | 63 |
| 1000 | 52 | 580 | 76 | 560 |

Rural

A log-log scatter plot titled 'Rural' showing runoff frequency. The x-axis is 'Return Period (years)' from 1 to 10000, and the y-axis is 'Runoff (mm)' from 0 to 250. Two data series are shown: 'Present' (blue circles) and '2100' (orange circles). A dotted regression line is fitted with the equation $y = 2.6449x^{0.4691}$.

| Return Period (years) | Present (mm) | 2100 (mm) |
|-----------------------|--------------|-----------|
| 10 | ~5 | ~5 |
| 100 | ~15 | ~15 |
| 1000 | ~50 | ~70 |

Urban

A log-log scatter plot titled 'Urban' showing runoff frequency. The x-axis is 'Return Period (years)' from 1 to 10000, and the y-axis is 'Runoff (mm)' from 0 to 350. Two data series are shown: 'Present' (blue circles) and '2100' (orange circles). A dotted regression line is fitted with the equation $y = 3.0299x^{0.5103}$.

| Return Period (years) | Present (mm) | 2100 (mm) |
|-----------------------|--------------|-----------|
| 10 | ~5 | ~5 |
| 100 | ~15 | ~15 |
| 1000 | ~50 | ~80 |

*The example results are based on the runoff-frequency curves shown in the bottom row for rural and urban areas.

C.2 Population growth

The Office for National Statistics (ONS) produce population projections for England, Wales, Scotland and Northern Ireland to 2100, with sub-national population projections to 2037. The Adaptation Sub-Committee (ASC) extrapolated this data to provide population projections to 2100 for Low, Principal and High population growth variants at a local authority level (Sayers et al., 2015c).

The Low and High variants used here generally indicate a growth in population (particularly London and the south-east of England). The only exceptions to this are in Northern Ireland (where, under the low growth variant, population decreases slightly by 2080s) and in Wales (where, under the low growth variant, population decreases slightly between the 2050s and 2080s).

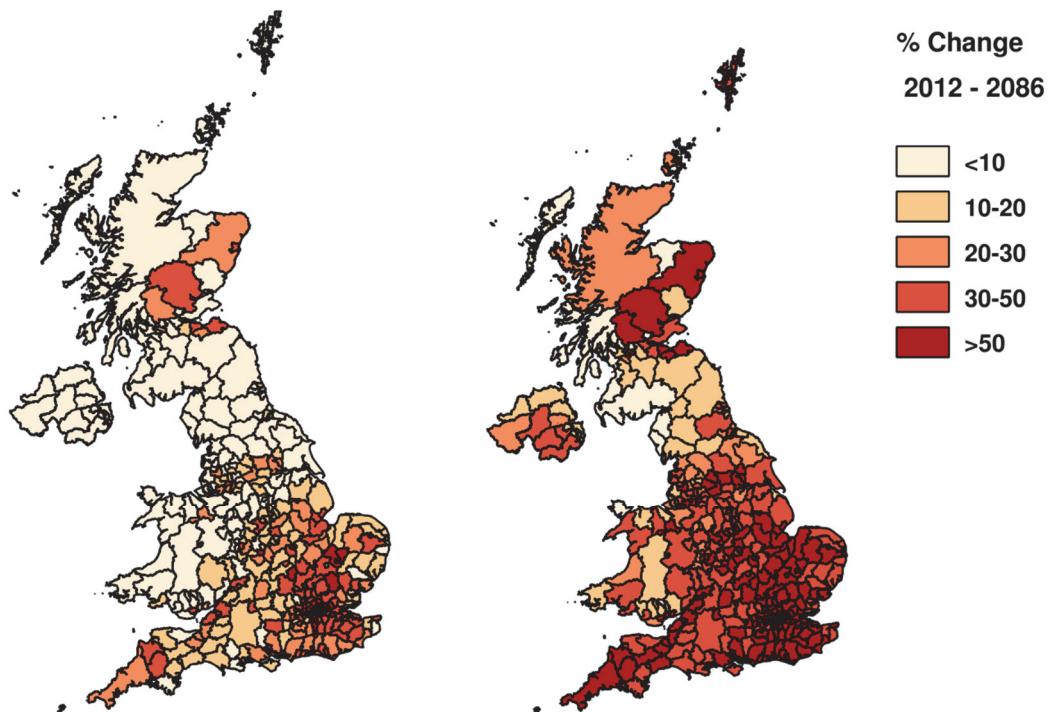

Locally applicable property occupancy rates (derived at neighbourhood scale based on property and census data) are used to translate the population projections to the construction of new residential properties on the floodplain (after taking appropriate account of spatial planning).

The population growth projections are summarised in Table C-4 and Figure C-1.

Note: It is assumed that occupancy rates remain constant into the future (despite occupancy rates being predicted to fall by 6% by 2037). This is because of difficulties in meaningfully differentiating changes across neighbourhoods, but could be explored further in future analysis. Non-residential properties are assumed to remain unchanged.

Table C-4 Future population growth: A summary (Sayers et al., 2015b)

| Region | Current population (at 2012) | Future Population (total no. of people) and growth (as a % change from 2012) | | | | | |
|------------------|------------------------------|--|---------------|---------------|---------------|---------------|---------------|
| | | Low | | | High | | |
| | | 2020s | 2050s | 2080s | 2020s | 2050s | 2080s |
| UK | 63.7m | 68.4m +7% | 74.2m +17% | 76.5m +20% | 70.1m +10% | 83.0m +31% | 97.2m +53% |
| England | 53.5m | 57.7m +8% | 63.4m +18% | 65.9m +23% | 59.2m +11% | 70.9m +33% | 83.7m +56% |
| Wales | 3.08m | 3.21m +4% | 3.25m +5% | 3.18m +3% | 3.29m +7% | 3.63m +18% | 4.07m +32% |
| Scotland | 5.31m | 5.53m +4% | 5.67m +7% | 5.63m +7% | 5.67m +7% | 6.35m +20% | 7.17m +36% |
| Northern Ireland | 1.82m | 1.92m +6% | 1.93m +6% | 1.77m -3% | 1.97m +8% | 2.16m +19% | 2.30m +27% |

Left: Low growth variant. Right: High growth variant

Figure C-1 Projected population increases by local authority area (Sayers et al., 2015b)

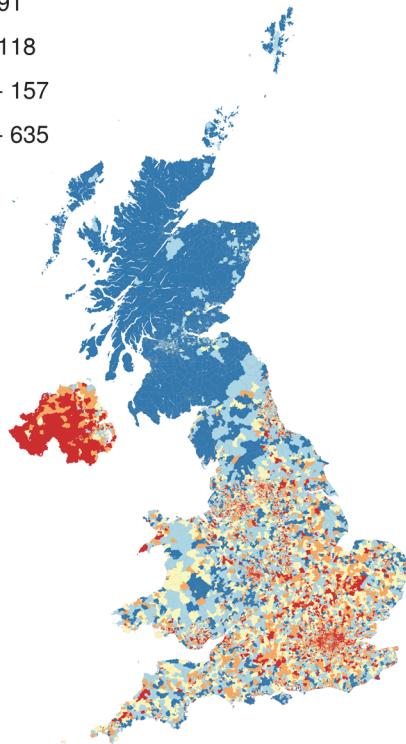

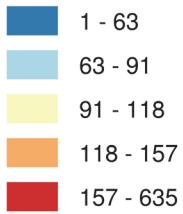

C.3 Demographic change (Age profile)

Between 2014 and 2025 the numbers aged over 75 are expected to increase by 37% (2.2 million). This compares to an expected growth of 8% in population as whole (ONS 2014 principal projection – Figure C-2). Growing numbers of elderly people, and the increasing number of under 5 year olds projected to occur from around the 2040s, could have a significant influence on overall vulnerability. However, given that the ONS 2014 principal projections for the Under 5s and Over 75s (Table C-5) provide no information on change in the spatial distribution of age this has no impact on the NFVI or SFRI z score ranking. The age projection does however impact the number of elderly and very young people that may be at risk.

Table C-5 Changing demographics: Percentage change in population under 5 and over 75 years old

| Age Category | % increase by year (ONS, 2014 Principal Projection) | | |
|--------------------|---|------|------|
| | 2025 | 2055 | 2085 |
| Under 5 | 1.3% | 8.2% | 15% |
| Over 75 | 37% | 128% | 185% |
| General population | 8% | 22% | 34% |

Under 5s 2080s

Over 75s 2080s

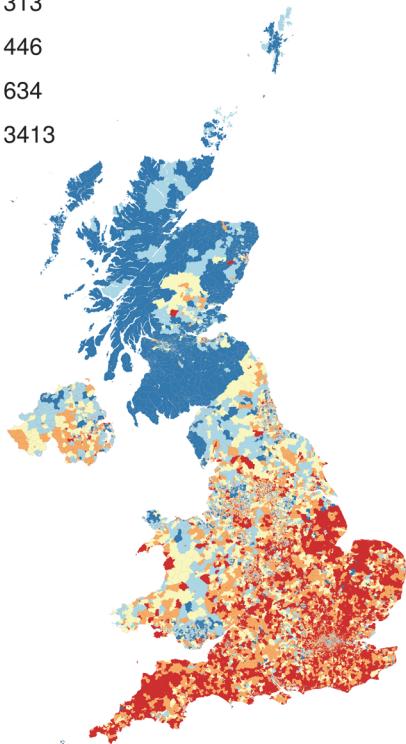

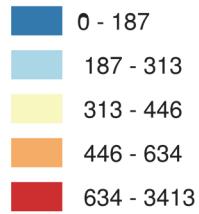

Figure C-2 Population by growth by age category, 2085, high growth variant
